

SUSHI-RJ

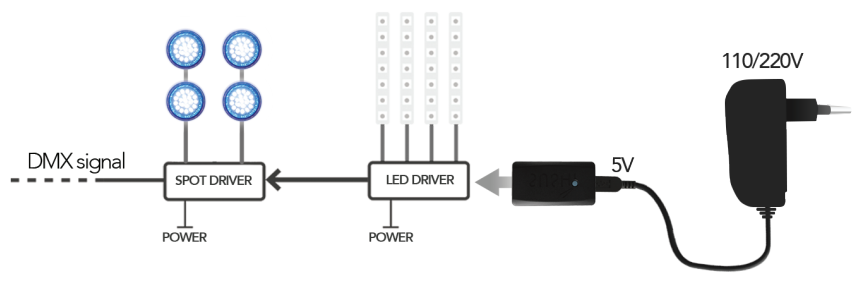

SUSHI is the most attractive DMX lighting control package on the market. With 12 stand alone DMX channels and software included. (EASY STAND ALONE windows + ARCOLIS android)
 The SUSHI uses high quality hardware designed, a world-class design: stand alone, USB plug&play, 128 DMX channels, expandable to 512, output connection via block or RJ, 2 indicators, one button.
 SUSHI stands for "Sunlite Universal Smart Handy Interface".
 Program all your lighting scenes using your computer or your android phone, then write to the memory of the SUSHI.
 You can then disconnect the USB cable and control your lights in stand alone using a standard USB 5V power.

(Mac Software option also available to purchase extra)
